PAVETESTING® LTD , United Kingdom announces the launch of the PaveHWD

Letchworth , UK – December 2014

PaveTesting Ltd, has announced that it has launched the Pave®HWD, that will be the newest addition to our Pave®FWD range. The official launch will be 12th January 2014. TRB, Washington D.C

A standard Falling Weight Deflectometer imparts a maximum force of 150kN in to the pavement surface which is used to simulate a vehicle tyre loading. Increasing the load to 250kN gives the capacity to test much stiffer pavement surfaces such as Airport Runways.

“Our development of the Pave®HWD comes after nearly 5 years of research and industry investigation. The new design incorporates many revolutionary features and innovative thinking at a price that is right for our customers.

We are proud of our English heritage and I am proud of what our engineers have come up with. We have a great team at PaveTesting and I am sure the Pave®HWD will be another great product for our customers. said Barry Goff, Managing Director PaveTesting Ltd .

The Pave®HWD key features are shown below

One Chassis design for all models, 150kN, 250kN and 350kN, with a simple load cell replacement.
Folding Chassis design for easy of transport and reduced shipping costs.
Digital Geophone signal, totally eliminating analogue signal degradation.

About PaveTesting Ltd

Based in Letchworth, UK, PaveTesting Limited has been at the forefront of developing new technologies for over 12 years. We design and manufacture pavement testing equipment to meet the requirements of regulators and commercial customer on a global scale.

PaveTesting® Ltd, supply government agencies, major civil engineering contractors and airport operators world wide and their range of friction, deflection and profile measuring machines are today considered to be the best in the industry.
